Languages: Indonesian (native), English (professional working proficiency)

PROFESSIONAL SUMMARY

Software developer with 5+ years of daily development experience, specializing in Node.js and JavaScript/TypeScript backend and full-stack work in fully remote settings. Built production REST APIs, messaging automation services, document-generation APIs, and SaaS dashboards on Node.js with Express, NestJS, Prisma ORM, and PostgreSQL. Author of 205 original repositories (80 TypeScript, 39 JavaScript), with several Node.js systems maintained continuously in production for 12-16 months each, including a 16-month OCR plagiarism-detection platform and an 11-month WhatsApp API service. Experienced across the full delivery cycle: database schema, REST API, front-end, deployment, and CI/CD.

WORK EXPERIENCE

Fullstack Engineer — Metito Indonesia

Contract | June 2025 – June 2026 | Indonesia

- Delivered full-stack features end to end, from database schema and REST API to production front-end.
- Built applications and internal systems supporting water and wastewater treatment operations across Indonesia (metito.id).

Fullstack Developer — PT Ide Kreatif Asia (Saku Sultan)

December 2022 – January 2025 | Indonesia

- Engineered a production fintech e-wallet published on Google Play and the Apple App Store, reaching 10,000+ installs and a 4.7-star rating.
- Implemented the internal admin dashboard for operations and transaction monitoring.
- Built backend services in Go, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming.
- Developed the cross-platform mobile application in React Native and Expo, including EAS build and store submission, passing both Apple and Google review.

Fullstack Developer — Universitas Muhammadiyah Makassar

Contract | July 2022 – January 2025 | Makassar, Indonesia

- Built SINTEKMu, the Faculty of Engineering information system, live in production at simtekmu.teknik.unismuh.ac.id.
- Implemented role-based access control across 6 distinct user levels, with complex relational data and reporting.
- Maintained and iterated on the platform continuously, contributing 580+ commits.

Software Engineer — DPRD Provinsi, Kota Sinjai

Project-based | October 2023 – March 2024 | Sinjai, Indonesia

- Developed a real-time election vote-monitoring application, delivered to specification and on schedule.

Full-Stack & AI/ML Engineer — devnolife studio (Independent)

2021 – Present | Makassar, Indonesia

- Delivered 200+ shipped projects for clients and institutions across web, SaaS, mobile, and AI, working remotely with Node.js/TypeScript as the core stack.
- Built Node.js services in long-term production use: WhatsApp messaging automation with notifications and OTP, a template-driven document-generation REST API, and automated certificate generation with bulk distribution.
- Built a production LLM/RAG backend in Go (chi v5, PDF ingestion, chunking, embedding, retrieval) powering fokusngajar.id, with rate limiting, metrics, and multi-stage Docker builds.

TECHNICAL SKILLS

Languages: JavaScript (expert), TypeScript (expert), Python (advanced), Go / Golang (working), SQL, HTML, CSS, SCSS

Back-End: Node.js, Express, NestJS, REST API, JWT authentication, Prisma ORM, Go / Golang (chi, Gin), Python (FastAPI, Flask)

Databases & Messaging: PostgreSQL, MongoDB, Redis, RabbitMQ, Apache Kafka

Front-End: React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive web design

DevOps & Tools: Git, Docker, CI/CD, Vercel, Linux, Postman

Mobile: React Native, Expo, Expo Router, NativeWind, EAS Build, App Store and Play Store submission

AI, Data & Vision: LLM APIs, RAG pipelines, IndoBERT, mT5, TextRank, TF-IDF, cosine similarity, OCR, OpenCV, Pandas, NLP (Bahasa Indonesia)

KEY PROJECTS

Turnitin-Style Plagiarism Detection Platform

Approximately 16 months | Node.js, SCSS, OCR

Full-stack OCR-based plagiarism detection system with REST backend and analytics dashboard. Longest continuously maintained build at approximately 500 days. Front-end: github.com/devnolife/turnitinApp-frontend

WhatsApp API Service

11 months | JavaScript, Node.js

Messaging automation and integration layer providing notifications, OTP delivery, and bot workflows. github.com/devnolife/whatsapp-api

Certi-Gen Distributor

12 months | JavaScript

Automated certificate generation and bulk distribution via email and WhatsApp. github.com/devnolife/certi-gen-distributor

PemiluDigital — Digital Election Platform

Approximately 1 year | TypeScript, SCSS

Full-stack digital election system with voter data management, real-time vote tallying, role-based access control, and auditing. Largest codebase authored to date at approximately 224 MB.

SaaS GuruPintar — Multi-Tenant Education SaaS

Approximately 16 months | TypeScript

Multi-tenant SaaS platform for an education product, covering authentication, subscription billing, and administrative dashboards.

SAKTI Dashboard — Enterprise Operations Dashboard

15 months | TypeScript, in production

Enterprise operations dashboard (approximately 97 MB) with rich data views and reporting, running in production for 450+ days.

EDUCATION

Master of Science (S2), Informatics Engineering

Universitas Hasanuddin (UNHAS), Makassar | In progress

Bachelor of Engineering (S1), Informatics Engineering

Universitas Muhammadiyah Makassar | GPA 3.92 / 4.00

- Best Graduate, Faculty of Engineering.
