Languages: Indonesian (native), English (professional working proficiency)

PROFESSIONAL SUMMARY

AI/ML and full-stack engineer with 5+ years of daily development experience shipping production software, including hands-on computer vision and OCR systems built with Python and OpenCV. Built and maintained a full-stack OCR-based plagiarism-detection platform in production for approximately 16 months, plus image processing, segmentation, face-swap, and media pipelines, document steganography, and Indonesian-language NLP (text summarization, paraphrasing, semantic similarity). Author of 205 original repositories (36 in Python), with strong software engineering discipline across the full delivery cycle: data pipelines, REST APIs, clean documented code, Docker, and CI/CD. Also delivered a fintech e-wallet live on Google Play and the App Store and a Go-based LLM/RAG backend in production.

WORK EXPERIENCE

Fullstack Engineer — Metito Indonesia

Contract | June 2025 – June 2026 | Indonesia

- Built applications and internal systems supporting water and wastewater treatment operations across Indonesia (metito.id).
- Delivered full-stack features end to end, from database schema and REST API to production front-end.

Fullstack Developer — PT Ide Kreatif Asia (Saku Sultan)

December 2022 – January 2025 | Indonesia

- Engineered a production fintech e-wallet published on Google Play and the Apple App Store, reaching 10,000+ installs and a 4.7-star rating.
- Built backend services in Go, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming.
- Developed the cross-platform mobile application in React Native and Expo, including EAS build and store submission, passing both Apple and Google review.
- Implemented the internal admin dashboard for operations and transaction monitoring.

Fullstack Developer — Universitas Muhammadiyah Makassar

Contract | July 2022 – January 2025 | Makassar, Indonesia

- Built SINTEKMu, the Faculty of Engineering information system, live in production at simtekmu.teknik.unismuh.ac.id.
- Implemented role-based access control across 6 distinct user levels, with complex relational data and reporting.
- Maintained and iterated on the platform continuously, contributing 580+ commits.

Software Engineer — DPRD Provinsi, Kota Sinjai

Project-based | October 2023 – March 2024 | Sinjai, Indonesia

- Developed a real-time election vote-monitoring application, delivered to specification and on schedule.

Full-Stack & AI/ML Engineer — devnolife studio (Independent)

2021 – Present | Makassar, Indonesia

- Built computer vision and multimedia solutions in Python: image processing, segmentation, face-swap, and media pipelines with OpenCV.
- Delivered OCR and document-automation systems: scanning, text extraction, and auto-generation of documents, certificates, reports, and academic papers.
- Specialized in Indonesian-language NLP: text summarization, paraphrasing, and semantic plagiarism detection using IndoBERT, mT5, TextRank, TF-IDF, and cosine similarity.
- Built a production LLM/RAG backend in Go (chi v5, PDF ingestion, chunking, embedding, retrieval) powering fokusngajar.id, with rate limiting, metrics, and multi-stage Docker builds.
- Delivered 200+ shipped projects for clients and institutions across AI, web, SaaS, and mobile.

TECHNICAL SKILLS

Languages: Python (advanced), TypeScript (expert), JavaScript (expert), Go / Golang (working), SQL, HTML, CSS, SCSS

AI, Vision & Data: OpenCV, OCR pipelines, image processing, segmentation, face-swap and media pipelines, steganography, LLM APIs, RAG pipelines, IndoBERT, mT5, TextRank, TF-IDF, cosine similarity, Hyperopt, Pandas, Hadoop/HDFS, NLP (Bahasa Indonesia)

DevOps & Tools: Docker, Git, CI/CD, Linux, Vercel, Postman

Back-End: Python (FastAPI, Flask), Node.js, Express, NestJS, Go / Golang (chi, Gin), REST API, JWT authentication, Prisma ORM

Databases & Messaging: PostgreSQL, MongoDB, Redis, RabbitMQ, Apache Kafka

Front-End: React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive web design

Mobile: React Native, Expo, Expo Router, NativeWind, EAS Build, App Store and Play Store submission

KEY PROJECTS

Turnitin-Style Plagiarism Detection Platform

Approximately 16 months | Node.js, SCSS, OCR

Full-stack OCR-based plagiarism detection system with document scanning and text-extraction pipeline, REST backend, and analytics dashboard. Longest continuously maintained build at approximately 500 days. Front-end: github.com/devnolife/turnitinApp-frontend

Generate Document API — Document Automation Service

10 months | JavaScript

REST service for programmatic, template-driven document generation and extraction workflows. github.com/devnolife/generate-document-api

Certi-Gen Distributor

12 months | JavaScript

Automated certificate generation and bulk distribution via email and WhatsApp. github.com/devnolife/certi-gen-distributor

PemiluDigital — Digital Election Platform

Approximately 1 year | TypeScript, SCSS

Full-stack digital election system with voter data management, real-time vote tallying, role-based access control, and auditing. Largest codebase authored to date at approximately 224 MB.

SAKTI Dashboard — Enterprise Operations Dashboard

15 months | TypeScript, in production

Enterprise operations dashboard (approximately 97 MB) with rich data views and reporting, running in production for 450+ days.

WhatsApp API Service

11 months | JavaScript, Node.js

Messaging automation and integration layer providing notifications, OTP delivery, and bot workflows.

github.com/devnolife/whatsapp-api

EDUCATION

Master of Science (S2), Informatics Engineering

Universitas Hasanuddin (UNHAS), Makassar | In progress

Bachelor of Engineering (S1), Informatics Engineering

Universitas Muhammadiyah Makassar | GPA 3.92 / 4.00

- Best Graduate, Faculty of Engineering.
