PROFESSIONAL SUMMARY

Backend-focused software engineer with 5+ years of daily development experience shipping production systems in fintech, government, and education. Built Go backend services for a production fintech e-wallet, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming; also authored a Go LLM/RAG backend integrating model APIs into reliable production flows with rate limiting, metrics, and Docker deployment. Strong with PostgreSQL, REST APIs, event-driven messaging, and end-to-end delivery from data model to deployment. Author of 205 original repositories, with several systems maintained continuously in production for 12-16 months each.

WORK EXPERIENCE

Fullstack Developer — PT Ide Kreatif Asia (Saku Sultan)

December 2022 – January 2025 | Indonesia

- Built backend services in Go for a production fintech e-wallet, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming.
- Engineered the e-wallet published on Google Play and the Apple App Store, reaching 10,000+ installs and a 4.7-star rating.
- Implemented the internal admin dashboard for operations and transaction monitoring.
- Developed the cross-platform mobile application in React Native and Expo, including EAS build and store submission, passing both Apple and Google review.

Fullstack Engineer — Metito Indonesia

Contract | June 2025 – June 2026 | Indonesia

- Built applications and internal systems supporting water and wastewater treatment operations across Indonesia (metito.id).
- Delivered full-stack features end to end, from database schema and REST API to production front-end.

Fullstack Developer — Universitas Muhammadiyah Makassar

Contract | July 2022 – January 2025 | Makassar, Indonesia

- Built SINTEKMu, the Faculty of Engineering information system, live in production at simtekmu.teknik.unismuh.ac.id.
- Implemented role-based access control across 6 distinct user levels, with complex relational data and reporting.
- Maintained and iterated on the platform continuously, contributing 580+ commits.

Software Engineer — DPRD Provinsi, Kota Sinjai

Project-based | October 2023 – March 2024 | Sinjai, Indonesia

- Developed a real-time election vote-monitoring application, delivered to specification and on schedule.

Full-Stack & AI/ML Engineer — devnolife studio (Independent)

2021 – Present | Makassar, Indonesia

- Built a production LLM/RAG backend in Go (chi v5, PDF ingestion, chunking, embedding, retrieval) powering fokusngajar.id, with rate limiting, metrics, and multi-stage Docker builds.
- Delivered 200+ shipped projects for clients and institutions across web, SaaS, mobile, and AI.
- Specialized in Indonesian-language NLP: text summarization, paraphrasing, and semantic plagiarism detection.

TECHNICAL SKILLS

Languages: Go / Golang (working), TypeScript (expert), JavaScript (expert), Python (advanced), SQL, HTML, CSS, SCSS

Back-End: Go / Golang (chi, Gin), Node.js, Express, NestJS, Python (FastAPI, Flask), REST API, JWT authentication, Prisma ORM

Databases & Messaging: PostgreSQL, Redis, Apache Kafka, RabbitMQ, MongoDB

AI, Data & Vision: LLM APIs, RAG pipelines, IndoBERT, mT5, TextRank, TF-IDF, cosine similarity, OCR, OpenCV, Pandas, NLP (Bahasa Indonesia)

DevOps & Tools: Docker, CI/CD, Git, Linux, Vercel, Postman

Front-End: React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive web design

Mobile: React Native, Expo, Expo Router, NativeWind, EAS Build, App Store and Play Store submission

KEY PROJECTS

PemiluDigital — Digital Election Platform

Approximately 1 year | TypeScript, SCSS

Full-stack digital election system with voter data management, real-time vote tallying, role-based access control, and auditing. Largest codebase authored to date at approximately 224 MB.

SAKTI Dashboard — Enterprise Operations Dashboard

15 months | TypeScript, in production

Enterprise operations dashboard (approximately 97 MB) with rich data views and reporting, running in production for 450+ days.

Turnitin-Style Plagiarism Detection Platform

Approximately 16 months | Node.js, SCSS, OCR

Full-stack OCR-based plagiarism detection system with REST backend and analytics dashboard. Longest continuously maintained build at approximately 500 days. Front-end: github.com/devnolife/turnitinApp-frontend

SaaS GuruPintar — Multi-Tenant Education SaaS

Approximately 16 months | TypeScript

Multi-tenant SaaS platform for an education product, covering authentication, subscription billing, and administrative dashboards.

WhatsApp API Service

11 months | JavaScript, Node.js

Messaging automation and integration layer providing notifications, OTP delivery, and bot workflows. github.com/devnolife/whatsapp-api

Certi-Gen Distributor

12 months | JavaScript

Automated certificate generation and bulk distribution via email and WhatsApp. github.com/devnolife/certi-gen-distributor

EDUCATION

Master of Science (S2), Informatics Engineering

Universitas Hasanuddin (UNHAS), Makassar | In progress

Bachelor of Engineering (S1), Informatics Engineering

Universitas Muhammadiyah Makassar | GPA 3.92 / 4.00

- Best Graduate, Faculty of Engineering.
