Languages: Indonesian (native), English (professional working proficiency)

PROFESSIONAL SUMMARY

Full-stack developer with 5+ years of daily development experience shipping production web applications end to end: SQL database schema, REST API back-ends, and modern front-ends. Expert in TypeScript and JavaScript with production experience in Node.js, React, Next.js, Go, and PHP-era codebases migrated to modern stacks. Comfortable with asynchronous programming, message-driven architecture (RabbitMQ, Kafka), and PostgreSQL. Author of 205 original repositories, with several systems maintained continuously in production for 12-16 months each. Works daily with product and design roles, participates in code and system design reviews, and owns features from ticket to deployment. Excellent written and verbal communication in English and Indonesian.

WORK EXPERIENCE

Fullstack Engineer — Metito Indonesia

Contract | June 2025 – June 2026 | Indonesia

- Delivered full-stack features end to end, from database schema and REST API to production front-end.
- Built applications and internal systems supporting water and wastewater treatment operations across Indonesia (metito.id).

Fullstack Developer — PT Ide Kreatif Asia (Saku Sultan)

December 2022 – January 2025 | Indonesia

- Built backend services in Go, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming — concurrent, asynchronous, fault-tolerant service design.
- Engineered a production fintech e-wallet published on Google Play and the Apple App Store, reaching 10,000+ installs and a 4.7-star rating.
- Implemented the internal admin dashboard for operations and transaction monitoring.
- Developed the cross-platform mobile application in React Native and Expo, including EAS build and store submission, passing both Apple and Google review.

Fullstack Developer — Universitas Muhammadiyah Makassar

Contract | July 2022 – January 2025 | Makassar, Indonesia

- Built SINTEKMu, the Faculty of Engineering information system, live in production at simtekmu.teknik.unismuh.ac.id.
- Implemented role-based access control across 6 distinct user levels, with complex relational data and reporting on a SQL database.
- Maintained and iterated on the platform continuously, contributing 580+ commits through ongoing code review and refactoring.

Software Engineer — DPRD Provinsi, Kota Sinjai

Project-based | October 2023 – March 2024 | Sinjai, Indonesia

- Developed a real-time election vote-monitoring application, delivered to specification and on schedule.

Full-Stack & AI/ML Engineer — devnolife studio (Independent)

2021 – Present | Makassar, Indonesia

- Delivered 200+ shipped projects for clients and institutions across web, SaaS, mobile, and AI, coordinating directly with clients on requirements, design, and delivery.
- Built a production LLM/RAG backend in Go (chi v5, PDF ingestion, chunking, embedding, retrieval) powering fokusngajar.id, with rate limiting, metrics, and multi-stage Docker builds.
- Specialized in Indonesian-language NLP: text summarization, paraphrasing, and semantic plagiarism detection.

TECHNICAL SKILLS

Languages: TypeScript (expert), JavaScript (expert), SQL, Go / Golang (working), Python (advanced), HTML, CSS, SCSS

Back-End: Node.js, Express, NestJS, REST API, JWT authentication, Prisma ORM, Go / Golang (chi, Gin), Python (FastAPI, Flask)

Databases & Messaging: PostgreSQL, MongoDB, Redis, RabbitMQ, Apache Kafka

Front-End: React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive web design

DevOps & Tools: Git, Docker, CI/CD, Vercel, Linux, Postman

Mobile: React Native, Expo, Expo Router, NativeWind, EAS Build, App Store and Play Store submission

AI, Data & Vision: LLM APIs, RAG pipelines, IndoBERT, mT5, TextRank, TF-IDF, cosine similarity, OCR, OpenCV, Pandas, NLP (Bahasa Indonesia)

KEY PROJECTS

PemiluDigital — Digital Election Platform

Approximately 1 year | TypeScript, SCSS

Full-stack digital election system with voter data management, real-time vote tallying, role-based access control, and auditing. Largest codebase authored to date at approximately 224 MB.

Turnitin-Style Plagiarism Detection Platform

Approximately 16 months | Node.js, SCSS, OCR

Full-stack OCR-based plagiarism detection system with REST backend and analytics dashboard. Longest continuously maintained build at approximately 500 days. Front-end: github.com/devnolife/turnitinApp-frontend

SAKTI Dashboard — Enterprise Operations Dashboard

15 months | TypeScript, in production

Enterprise operations dashboard (approximately 97 MB) with rich data views and reporting, running in production for 450+ days.

SaaS GuruPintar — Multi-Tenant Education SaaS

Approximately 16 months | TypeScript

Multi-tenant SaaS platform for an education product, covering authentication, subscription billing, and administrative dashboards.

Generate Document API

10 months | JavaScript, Node.js

REST service for programmatic, template-driven document generation. github.com/devnolife/generate-document-api

WhatsApp API Service

11 months | JavaScript, Node.js

Messaging automation and integration layer providing notifications, OTP delivery, and bot workflows. github.com/devnolife/whatsapp-api

EDUCATION

Master of Science (S2), Informatics Engineering

Universitas Hasanuddin (UNHAS), Makassar | In progress

Bachelor of Engineering (S1), Informatics Engineering

Universitas Muhammadiyah Makassar | GPA 3.92 / 4.00

- Best Graduate, Faculty of Engineering.
