

Andi Agung Dwi Arya

Full-Stack Developer | AI/ML Engineer

Email: andiagung193@gmail.com | Phone/WhatsApp: +62 851 7107 9607

Location: Makassar, South Sulawesi, Indonesia | Open to remote

GitHub: github.com/devnolife | X: x.com/devnolife

Languages: Indonesian (native), English (professional working proficiency)

PROFESSIONAL SUMMARY

Backend-capable full-stack software engineer with 5+ years of daily development experience building production REST APIs, backend services, and SaaS tools. Strong in Python (FastAPI, Flask) and proficient with Git, Docker (including multi-stage builds), and CI/CD pipelines. Built messaging integrations and connector-style services (WhatsApp API automation with notifications, OTP, and bots), a Go-based LLM/RAG backend in production, and Indonesian-language NLP pipelines. Uses AI coding assistants (GitHub Copilot) as part of the daily development workflow. Author of 205 original repositories, with several systems maintained continuously for 12-16 months each. Works independently and delivers to spec and on schedule within distributed, remote teams, with strong written communication.

WORK EXPERIENCE

Fullstack Engineer — Metito Indonesia

Contract | June 2025 – June 2026 | Indonesia

- Delivered full-stack features end to end, from database schema and REST API to production front-end.
- Built applications and internal systems supporting water and wastewater treatment operations across Indonesia (metito.id).

Fullstack Developer — PT Ide Kreatif Asia (Saku Sultan)

December 2022 – January 2025 | Indonesia

- Built backend services in Go, using RabbitMQ for job queues, notifications, and webhooks, and Kafka for transaction event streaming.
- Engineered a production fintech e-wallet published on Google Play and the Apple App Store, reaching 10,000+ installs and a 4.7-star rating.
- Implemented the internal admin dashboard for operations and transaction monitoring.
- Developed the cross-platform mobile application in React Native and Expo, including EAS build and store submission, passing both Apple and Google review.

Fullstack Developer — Universitas Muhammadiyah Makassar

Contract | July 2022 – January 2025 | Makassar, Indonesia

- Built SINTEKMu, the Faculty of Engineering information system, live in production at simtekmu.teknik.unismuh.ac.id.
- Implemented role-based access control across 6 distinct user levels, with complex relational data and reporting.
- Maintained and iterated on the platform continuously, contributing 580+ commits under version control (Git).

Software Engineer — DPRD Provinsi, Kota Sinjai

Project-based | October 2023 – March 2024 | Sinjai, Indonesia

- Developed a real-time election vote-monitoring application, delivered to specification and on schedule.

Full-Stack & AI/ML Engineer — devnolife studio (Independent)

2021 – Present | Makassar, Indonesia

- Built a production LLM/RAG backend in Go (chi v5, PDF ingestion, chunking, embedding, retrieval) powering fokusngajar.id, with rate limiting, metrics, and multi-stage Docker builds.
- Built messaging automation and integration services on top of the WhatsApp API: notifications, OTP delivery, bot workflows, and SaaS admin dashboards.
- Specialized in Indonesian-language NLP with Python: text summarization, paraphrasing, and semantic plagiarism detection.
- Delivered 200+ shipped projects for clients and institutions across web, SaaS, mobile, and AI, working independently end to end.

TECHNICAL SKILLS

Languages: Python (advanced), TypeScript (expert), JavaScript (expert), Go / Golang (working), SQL, HTML, CSS, SCSS

Back-End: Python (FastAPI, Flask), Node.js, Express, NestJS, Go / Golang (chi, Gin), REST API, JWT authentication, Prisma ORM

DevOps & Tools: Git, Docker, CI/CD, Linux, Postman, Vercel

AI, Data & Vision: LLM APIs, RAG pipelines, AI coding assistants (GitHub Copilot), IndoBERT, mT5, TextRank, TF-IDF, cosine similarity, OCR, OpenCV, Pandas, NLP (Bahasa Indonesia)

Databases & Messaging: PostgreSQL, MongoDB, Redis, RabbitMQ, Apache Kafka

Front-End: React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive web design

Mobile: React Native, Expo, Expo Router, NativeWind, EAS Build, App Store and Play Store submission

KEY PROJECTS

WhatsApp API Service — Messaging Integration Layer

11 months | JavaScript, Node.js

Connector-style messaging automation and integration layer for a SaaS platform, providing notifications, OTP delivery, and bot workflows over the WhatsApp API. github.com/devnolife/whatsapp-api

Turnitin-Style Plagiarism Detection Platform

Approximately 16 months | Node.js, SCSS, OCR

Full-stack OCR-based plagiarism detection system with REST backend and analytics dashboard. Longest continuously maintained build at approximately 500 days. Front-end: github.com/devnolife/turnitinApp-frontend

Generate Document API

10 months | JavaScript

REST service for programmatic, template-driven document generation. github.com/devnolife/generate-document-api

PemiluDigital — Digital Election Platform

Approximately 1 year | TypeScript, SCSS

Full-stack digital election system with voter data management, real-time vote tallying, role-based access control, and auditing. Largest codebase authored to date at approximately 224 MB.

SaaS GuruPintar — Multi-Tenant Education SaaS

Approximately 16 months | TypeScript

Multi-tenant SaaS platform for an education product, covering authentication, subscription billing, and administrative dashboards.

Certi-Gen Distributor

12 months | JavaScript

Automated certificate generation and bulk distribution via email and WhatsApp. github.com/devnolife/certi-gen-distributor

EDUCATION

Master of Science (S2), Informatics Engineering

Universitas Hasanuddin (UNHAS), Makassar | In progress

Bachelor of Engineering (S1), Informatics Engineering

Universitas Muhammadiyah Makassar | GPA 3.92 / 4.00

- Best Graduate, Faculty of Engineering.
